Senior Business Analyst | Operations Reporting & Billing Process Owner

SUMMARY

Business and operations analyst with 5+ years owning reporting, forecasting, billing, and cost-allocation systems across a multi-client BPO portfolio. Designs the mechanisms leadership runs on: weekly business review (WBR) reporting products, Erlang-based staffing models, a monthly leadership cost-allocation model used for margin decisions, and end-to-end client billing workflows with external approval gates. Trusted by directors to validate invoices, explain numbers live to clients and executives, and turn ambiguous processes into documented, repeatable SOPs.

CORE SKILLS

Advanced Excel (XLOOKUP, SUMIFS, named ranges, mapping tables, macros) | WFM & Erlang staffing models | Five9, Dialpad, Salesforce & Power BI data exports | Paycom reconciliation | Billing & invoicing operations | Gross-margin / cost-allocation modeling | SOP & process design | AI-agent workflows: harness design, evals, prompt/context engineering (Claude Code, Copilot) | Python, JavaScript, Git, Node.js, React

PROFESSIONAL EXPERIENCE

Senior Business Analyst (Operations Reporting & Billing)

Nov 2020 - Present

Connexus Resource Group | Salt Lake City, UT

Progressed from CSR to the analyst who owns reporting, billing, and cost-allocation mechanisms across 9+ concurrent client accounts in education, healthcare, telecom, and retail.

- Own the monthly client billing lifecycle end to end for a multi-million-dollar portfolio: build draft billing details, contractor data, and invoices; manage external client approval gates; issue finals; and maintain PO and PO-line accuracy across fiscal-year changes.
- Serve as the invoice validation gate for leadership: reconcile vendor and contractor invoices against Paycom source-of-truth hours and signal director-level approval same day.
- Built and maintain the leadership cost-allocation model used monthly by the Director of Operations to rebalance headcount allocation and gross profit margin across all accounts, including an executive rollup view.
- Design and standardize WBR reporting products for multiple client accounts: define the metric logic, build the rollups and visuals, and rebuild data pipelines when vendor platforms (Five9, Dialpad) change their reporting structures.
- Developed Erlang-based staffing and service-level planners translating interval-level call volume into agents-required forecasts, occupancy, and shrinkage planning.
- Authored the reporting system architecture (control panel, mapping tables, named ranges, QA checks) that lets other analysts rebuild client WBRs without manual formula work, and the production SOPs that make weekly reporting repeatable.
- Maintained 90-100% bonus eligibility for 12+ consecutive months by delivering fully accurate, on-time reporting and billing under weekly and monthly deadlines.

Chargebacks & Disputes Analyst

Jun 2018 - Sep 2019

Galileo Financial Technology | Salt Lake City, UT

- Investigated and resolved financial disputes for account holders in compliance with internal and regulatory standards.
- Helped restructure dispute-processing workflows, increasing resolution throughput and improving data-tracking accuracy.

KEY ACHIEVEMENTS

- Cut weekly WBR production time by converting one-off reports into template-driven systems where a single date change refreshes all rollups and deck labels.
- Clarified a recurring client billing dispute by documenting the draft-to-final approval workflow, adopted as the standing SOP between finance ops and the client.

AI & TECHNICAL PROJECTS / CERTIFICATION

- LLM Workbench (github.com/KaydenClark/LLM_Workbench): open-source control-doc harness for AI-agent projects - agent behavior rules, task queues, verification and proof requirements - with a runnable eval framework and Node.js tooling to benchmark whether template changes actually improve agent outcomes.
- AI Agents Presentation (github.com/KaydenClark/AI_Agents_Presentation): interactive TypeScript presentation teaching non-technical audiences what AI agents are and how they work.
- Certification: Full Stack Web Development - Helio Training (Oct 2019 - Jan 2020), graduated top of class.
