Business Process Analyst | Operations Systems, Reporting Governance & Financial Controls

SUMMARY

Business process and operations-systems analyst who designs reporting, control, and workflow systems for multi-account operations. Translates raw operational and financial inputs into validated KPIs, decision-ready reporting, staffing models, billing controls, and documented handoffs. Combines process redesign, data-quality validation, stakeholder enablement, and human-reviewed automation to reduce rework and key-person dependency.

CORE SKILLS

Process & analysis: workflow mapping, requirements gathering, process redesign, SOP and operating-model documentation, KPI definition, source-data validation

Financial operations: billing and invoice approval workflows, PO management, cost allocation, margin review, forecasting, capacity and Erlang staffing models

Systems & tools: Advanced Excel (XLOOKUP, SUMIFS, named ranges, mapping tables, macros), Power BI, Five9, Dialpad, Zendesk, Salesforce, Paycom, eClinicalWorks

AI enablement: human-reviewed workflow design, source validation and exception rules, evaluation harnesses, prompt and context engineering

PROFESSIONAL EXPERIENCE

Connexus Resource Group | Salt Lake City, UT

Nov 2020 - Present

Operations Support Analyst | *Functional focus: Business Process Analysis, Reporting Governance & Financial Controls*
Business process design and continuous improvement for reporting, billing, cost-allocation, and staffing workflows across 9+ concurrent client accounts in education, healthcare, telecom, and retail.

- Designed and maintained a repeatable reporting architecture that moves raw exports through mapping, transformation, rollup, presentation, and QA layers for a multi-account operating portfolio.
- Reconciled source-system data and KPI definitions across reporting platforms, correcting channel classification, duplicate/null handling, date logic, and other issues before results reached leadership or clients.
- Built financial-control and decision-support tools for billing, hours, rates, forecasts, margin review, and exception investigation; surfaced discrepancies to the accountable business owner before final approval.
- Developed capacity, staffing, transition, and onboarding tools that translated operational demand and service assumptions into planning inputs and handoff-ready schedules.
- Standardized reporting templates, SOPs, and validation checks; trained account teams to perform routine work independently while retaining escalation, quality review, and process-improvement responsibility.
- Gathered requirements and coordinated reporting access, data feeds, and custom-report work with vendors and internal stakeholders to make critical source data usable.

Galileo Financial Technology | Salt Lake City, UT

Jun 2018 - Sep 2019

Chargebacks & Disputes Analyst

- Investigated and resolved cardholder financial disputes in compliance with internal and regulatory standards.
- Helped restructure dispute-processing workflows, increasing resolution throughput and improving data-tracking accuracy.

PROJECTS

LLM Workbench (github.com/KaydenClark/LLM_Workbench): open-source control-document harness for AI-agent projects covering agent behavior rules, task queues, and verification requirements, with a runnable eval framework and Node.js tooling that benchmarks whether template changes actually improve agent outcomes.

AI Agents Presentation (github.com/KaydenClark/AI_Agents_Presentation): interactive TypeScript presentation teaching non-technical audiences what AI agents are and how they work.

EDUCATION & CERTIFICATION

Full Stack Web Development Certificate | Helio Training | Oct 2019 - Jan 2020 - graduated top of class
